Address: **Kurfürstendamm 10719 Berlin, Germany, Berlin**

Price: **Check with seller**

Fire safe ball valve manufacturer

Valvesonly Europe is the biggest Fire safe ball valve manufacturer in Germany. It is a type of ball valve that is designed to provide safe operation in fire. These valves have robust construction, design to withstand high pressure and can handle flammable media, provide tight shut and prevent leakage. Fire safe ball valves are a critical component. The main purpose of these valves is to stop the transmission of dangerous hazardous materials and protect equipment, machinery, personnel.

These valves come with mechanisms that close the valve automatically when exposed to fire or high temperatures. When the valve is open it allows fluids to flow freely through the valve and when closed it creates a tight seal and prevents leakage, when the fire or explosion occurs it closes automatically by the heat, the metal seating of the valve will remain intact, preventing flammable fluids from leaking in the case of a temperature increase.

As a leading Fire safe ball valve manufacturer in Germany, our high performance valve provide these feature:

High temperature resistance: They are constructed using material which makes them withstand high temperature and ensure proper performance in the event of a fire.

Quick shut off: They are designed with an emergency shut-off mechanism that automatically turns on when there is a fire, stopping the spread of flames and managing the discharge of dangerous substances.

Sealing capacity: They provide tight seal even in harsh conditions and stops flammable liquids from leakage enhances safety

Robust construction: They have robust construction which provide strength and longevity in harsh conditions.

Corrosion resistance: Provide excellent corrosion resistance improving longevity in harsh conditions.

Safety: They enhances safety by effectively operated in high temperature and prevent leakage
