Forklift Training, BobCat, Reach Truck, Overhead Crane, TLB, Excavator Training in Alberton

Our Training Course will help you regain the skills you have forgotten and will help you begin learning about new features on a forklift that you have never experienced before.

Forklifts are very large and elaborate machines, which makes them much more complicated to operate than standard vehicles. There are a lot of things you need to know to be able to operate forklifts safely and properly, such as how to handle flat tires, how to operate them indoors, how to choose the correct radius for forklifts, and how to use hydraulic components.
