Wonplug.com - The Uk Travel Plug uses a unique Type G electrical plug, characterized by three rectangular prongs forming a triangular pattern and often incorporating a built-in fuse for safety. Operating on a 230V/50Hz supply, it's incompatible with plugs from most other regions (like Europe's Type C or the US/Japan's Type A/B). Travelers must use a Type G adapter to connect their devices. Crucially, visitors from countries with 110-120V systems (like North America) also need to check their devices support 230V input or require a separate voltage converter alongside the adapter, especially for high-wattage appliances like hair dryers.
