Address: Magarpatta, Pune

Price: ? 4950.00

In today's electrically driven world, multi-core round cables have become essential components across a wide range of industries—from manufacturing and robotics to telecommunications and building automation. These cables are engineered to carry multiple signals or power feeds through a single, neatly organized jacket, improving space efficiency, reliability, and installation convenience.

If you're managing complex wiring systems where flexibility, protection, and compact design matter, multi-core round cables offer a powerful solution.

What is a Multi-Core Round Cable?

A multi-core round cable is a type of electrical cable that consists of two or more insulated conductors (cores) enclosed within a circular outer sheath. Each conductor can carry electrical power or signal independently, allowing a single cable to replace multiple individual wires.

The round shape offers better bending properties, mechanical strength, and ease of routing, especially in confined spaces or dynamic cable applications.

Key Features of Multi-Core Round Cables

Multiple Conductors in One JacketAvailable in configurations from 2-core to 61-core or more, reducing cable clutter and simplifying connections.
