Address:

III Floor, Prayosha Complex, Next To Hyundai Motor, Cochin

Price:

Check with seller

Container desiccant bags are an essential part of cargo protection during shipping, helping to ensure that goods arrive at their destination in optimal condition, free from moisture-related damage.

Cargo dry pak are peculiarly designed desiccants to keep goods and commodities fresh and moisture-free. It is formed using bentonite clay, calcium chloride and starch. Of these components, calcium chloride plays a vital role as it allows the desiccant to last for days which is an important feature required for shipping journeys. Cargo dry pak can last for over 50 days doing its job by absorbing moisture from the package and not releasing it back. Containers create an enclosed environment that aids in oxidation causing moisture-related damages such as mildew, mould, rust, fungus and corrosion.

Cargo Dry Pak is available in two sizes, namely:

500 gm. Cargo Dry Pak: - It can be placed on pallets or products. Best used for cartons, packages and crates.

1500 gm. Cargo Dry Pak: - It comes with a hook, hence can be hung on the sidewall of the container.
