Address:

37/3, Block 36, East Patel Nagar, Patel Nagar, New Delhi

Price:

Free

Fistula surgery is a medical procedure performed to treat fistulas, abnormal connections or passageways that develop between two organs or between an organ and the skin. These abnormal connections can occur due to various reasons such as infection, injury, or inflammation.

During fistula surgery, the surgeon aims to close off the abnormal passageway and restore normal anatomy. The specific approach to fistula surgery depends on factors such as the location and severity of the fistula, as well as the underlying cause.

The surgical technique may involve removing the affected tissue, repairing or reconnecting the affected organs or tissues, and closing the fistula opening. In some cases, the surgeon may need to use additional materials such as grafts or flaps to reinforce the repair and promote healing.

Fistula surgery is typically performed under general anesthesia, and patients may require a period of recovery following the procedure. The success of fistula surgery depends on various factors, including the underlying cause, the skill of the surgeon, and the overall health of the patient.
